Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

NAMES AND LABELS

- Buttons do not have an accessible name**
- Image elements do not have [alt] attributes**
- Links do not have a discernible name**

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

ARIA

- Elements use prohibited ARIA attributes**

These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

CONTRAST

- Background and foreground colors do not have a sufficient contrast ratio.**

These are opportunities to improve the legibility of your content.

TABLES AND LISTS

- Lists do not contain only elements and script supporting elements (<script> and <template>).**

These are opportunities to improve the experience of reading tabular or list data using assistive technology, like a screen reader.

BEST PRACTICES

- Touch targets do not have sufficient size or spacing.**

These items highlight common accessibility best practices.

NAVIGATION

- Heading elements are not in a sequentially-descending order**

These are opportunities to improve keyboard navigation in your application.

AUDIO AND VIDEO

- <video> elements contain a <track> element with [kind="captions"]**

These are opportunities to provide alternative content for audio and video. This may improve the experience for users with hearing or vision impairments.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).
